

Verisure expands roll-out of award-winning AI-powered GuardVision® Outdoor video detector, further reinforcing its leadership in monitored home security

- **Verisure's AI-powered GuardVision® Outdoor video detector extends protection beyond the home, including gardens and other outdoor areas**
- **The deployment of the device to new countries reinforces Verisure's leadership in applying AI to monitored security, combining advanced technology with 24/7 professional monitoring and human intervention**
- **New data from some of Verisure's largest markets highlights the value of proactive protection, showing that outdoor security solutions can help prevent more than half of detected intrusion attempts**
- **The GuardVision® Outdoor video detector is now available in 12 of Verisure's 18 markets**

Geneva, 2 October, 2026: Verisure, the world's leading provider of professionally monitored security services by customers served, is expanding the international rollout of its AI-powered GuardVision® Outdoor video detector, bringing advanced outdoor protection and earlier threat detection to more customers. The device is now available to customers in 12 markets and offers customers the opportunity to bolster their home protection.

The GuardVision® Outdoor video detector is the world's first EN50131 Grade 2-certified device with embedded Computer Vision AI. Fully integrated into the Verisure home alarm system, it helps detect the earliest signs of a threat outside the home.

The solution is already delivering measurable results in limiting the likelihood of a home intrusion. New data from some of Verisure's largest markets highlights the value of proactive protection, showing that its outdoor security solutions can help prevent more than half of detected intrusion attempts.

Austin Lally, Verisure CEO, said: "GuardVision® Outdoor video detector is a strong example of how we are using AI to extend protection beyond the home, detect potential threats earlier and support faster intervention when it matters most. What differentiates Verisure is not technology alone, but how we combine proprietary AI, data from trillions of interactions and alarm signals, deep security experience, 24/7 professional monitoring and human expertise into a single integrated service to protect our customers better. As we continue to invest in innovation, we believe AI will further strengthen our ability to protect customers and reinforce our leadership in professionally monitored security."

A Red Dot Design Award winner, the GuardVision® Outdoor video detector provides protection night and day outside of the property. It uses HD video with infrared night vision, image capture, two-way audio, and AI tools that can distinguish between human and non-human triggers to support Verisure's 24/7 human-monitored Alarm Receiving Centre with improved verification and intervention.

The GuardVision® Outdoor video detector is now available in 12 of Verisure's 18 markets: France, Italy, Spain, Portugal, Chile, Argentina, Brazil, Sweden, Denmark, Finland, Belgium, and Germany. Norway is scheduled to launch next month, while Mexico, the Netherlands and the UK are planned for rollout next year.

€170 Million investment fuels next generation of home security

In 2025 alone, Verisure has invested approximately €170 million into its innovation and technology capabilities to deploy innovations, features, products and service enhancements. The company continues to leverage AI and has already embedded the technology in its product and service ecosystem, from cameras to motion detectors, with additional innovations such as LockGuard™ and WiFi Vision™. These solutions are delivering tangible results, helping to improve verification accuracy, accelerate response times, and strengthen intervention capabilities.
